ABOUT ME

With a generalist background, I have been developing Android software since 2016 and it is where I feel most comfortable. I am not afraid of other stacks or platforms: I have done significant work as a DevOps and frontend developer, and have made contributions to backend and wherever I could add value.

I am passionate about automation, developer experience, frictionless processes and clean code. Throughout my career I have made a point in contributing to all four, regardless of my position. I am also an open-source enthusiast with various published repositories and contributions to many public projects.

EXPERIENCE

Senior SDK Engineer

Jun 2026 – Present

RevenueCat · Remote

Senior SDK Engineer at RevenueCat, where we help developers make more money. Work across the RevenueCat SDK family (Android, iOS, web, and the Flutter, React Native, KMP, Unity and Capacitor hybrids), with Android as the primary focus. Includes new feature development, public API design with strong backwards-compatibility guarantees, and performance work. Coordinate cross-platform contracts with and land behaviour changes consistently across every SDK. Contributor to CI, release automation and internal tooling shared across all SDK repositories.

Senior Android Engineer

Mar 2023 – Jun 2026

Cabify · Remote

Senior Android Engineer at Cabify, multi-mobility platform for people and parcels. Work on the main Rider public app, with millions of active users. Includes new feature development, maintenance and release management. Frequent contributor to process improvements, CI, and code sharing. Early adopter of AI tools, contributing rules, skills and setting up integrations.

Key technologies: Android, Kotlin, Compose, Bash, Gitlab CI, Elixir

Android Engineer

Sep 2021 – Mar 2023

Nextcloud · Remote

Android engineer at Nextcloud, a self-hosted, open-source file storage, sharing and productivity platform. Work on the main Nextcloud app for file management and sync on Android; additional work on the Nextcloud Talk chat and videocall app. Co-lead efforts to align app architecture and share code and config between different apps, with the intent to deduplicate efforts and facilitate cross-team work.

Key technologies: Android, Kotlin, Java, Bash, Python, Github Actions

DevOps / Android Engineer

Dec 2018 – Mar 2021

Imagames Gamification Services · Santiago de Compostela

Infrastructure and deployment management, monitoring and automation. Responsible for proposing and carrying out several extensive upgrades to development processes and infrastructure management, including containerization, automation and CI. Android development for client apps, developing new features and maintaining several existing apps, and improving development experience and build times.

VueJS Frontend for admin dashboards and public applications.

Key technologies: Docker, Ansible, Python, Android, Kotlin, Java, VueJS, Typescript

Android Developer

Oct 2016 – Apr 2018

CiTIUS - University of Santiago de Compostela

Android development, and occasional development on related projects. Research in medication adherence and mHealth. Main project: [Calendula](#), an open-source medication management app.

Key technologies: Android, Kotlin, Python, NodeJS

EDUCATION

Masters in Artificial Intelligence Research

Sep 2017 – Jul 2019

Menéndez Pelayo International University

Education in machine learning, artificial intelligence, statistics and data analysis, and introduction to scientific research.

Degree imparted by the Spanish Association for Artificial Intelligence (AEPIA) and managed by the Menéndez Pelayo International University (UIMP).

Degree in Computer Science

Sep 2012 – Sep 2016

University of Santiago de Compostela

Advanced education related to computer science, including but not limited to: software programming, architecture and design, systems engineering and systems administration.

End of Degree Project defense on September 2016, with title "Java Implementation of QRS clustering algorithm". Adaptation of an existing signal processing algorithm for its deployment on Android devices.

OPEN SOURCE & HOBBIES

Android ROM developer

Jun 2015 – Aug 2017

Personal project

Development of CyanogenMOD (later LineageOS) ROMs for Android devices. Open-source development including regular releases. Work in applications, kernels and system configuration.

Key technologies: Android, Java, C, Bash, Python

SKILLS

Source languages: Kotlin, Shell, Python, Elixir, TypeScript, Java, Javascript

Tools and frameworks: Android SDK, Gradle, Gitlab CI, Docker, AI Agents, Git, VueJS, NuxtJS

LANGUAGES

Native: Spanish, Galician

Foreign: English (Full professional proficiency)
